

## Installer Schemes & Inspection Services Kiwa Building Products

The correct use and application of a multitude of different materials is a determining factor in construction project quality. A Kiwa BDA Agrément product or system assessment can provide complete quality assurance to specifiers, builders and installers.

With years of building envelope consultancy experience, Kiwa Building Products (BP) independently assesses products and systems for suitability, safety, and 'fitness for purpose' in construction projects.

From roofing and façade products to basement waterproofing systems, we focus on ensuring the building envelope is constructed robustly to give our clients long term satisfaction.

We issue the BDA Agrément® for building envelope products and systems, which is recognised by architects, specifiers, engineers and building control personnel. Agréments confirm compliance, durability and confidence that products are suitable for their intended use.

### About BP's Installer Scheme

Our [Installer Assessment and Surveillance Scheme](#) checks that installation companies are installing to the correct standard and have the correct policies and procedures in place, to ensure they're robust, professional and follow best practices.

#### Benefits of being part of our Scheme:

- A way of demonstrating to clients your commitment to quality
- Installing Kiwa-certified material and being part of our Installer Scheme is a double threat to competitors
- You can use the supplied Kiwa logo in your marketing activities, to communicate your achievement and association with our globally recognised brand

### How to join the Scheme in 3 easy steps

1. We conduct an office audit at the installing company's depot, to check if the appropriate legal documentation, risk management, method statement, staff training, equipment maintenance and calibration, health and safety policy and site surveys are in place.
2. Once evidence has been collated and verified, our auditor will conduct an on-site visit to witness a live site installation and assess it against the current standard.
3. When the installation company has satisfied all conditions of the audits, we'll present them with a Kiwa Building Products' certificate and a Kiwa Installer Assessment and Surveillance Scheme pictogram for use on promotional material.

## Installer Schemes under insulation measures

One of these schemes can help you to:

- Show your business meets the technical requirements to install energy efficiency measures under Government scheme initiatives
- Demonstrate the level of quality assurance you deliver as a business
- Access new markets and profitability for your business by taking part in initiatives such as ECO
- Develop your services, gain more customers and expand and grow your market share
- Deliver low-carbon properties, giving your customers reduced energy costs and better living conditions
- Increase customer confidence by supporting high levels of consumer protection
- Spotlight your business to customers when searching for qualified and competent installers
- Demonstrate that your business benefits from consistency, efficiency and improvements with a Quality Management System

## We also offer inspection services

Whether you're manufacturing products, executing projects or working to set processes, our BP team can carry out an inspection, to help you:

- Reduce risk
- Improve quality control
- Meet regulatory and legal requirements

So, if you're looking to join an Installer Scheme, book a Factory Production Control visit or construction site inspection, get in touch with our team by calling [+44 \(0\)1332 977829](tel:+441332977829) or emailing [uk.bpenquiries@kiwa.com](mailto:uk.bpenquiries@kiwa.com)
